

SAMPLE — FOR DEMONSTRATION ONLY, NOT A PUBLISHED MISMO ESTIMATE

Mortgage Compliance Dataset (MCD)

Illustrative per-loan ROI model

Estimated savings

\$47 per loan (illustrative)

Where the estimate comes from

This sample breakdown models three areas where a standardized compliance dataset could reduce cost per loan compared to today's manual, inconsistent review process. These figures are placeholders for demonstration purposes and do not represent a real, published MISMO ROI model.

Cost driver	Illustrative savings	Basis (sample)
Reduced manual review time	\$28	Fewer hours per exam spent manually checking fields regulators could instead run programmatically
Fewer post-closing corrections	\$11	Standardized fields reduce rework triggered by inconsistent data caught after closing
Faster investor delivery cycle	\$8	Less back-and-forth between lender and investor over data format questions
Estimated total per loan	\$47	

Sample document generated to demonstrate the "View ROI breakdown" link pattern on the Work Product Overview redesign. Once a real MCD ROI model is published, this document would be replaced by the actual analysis.
